

NetSuite ODBC Module

Maximize Your NetSuite Data

KEY BENEFITS

- Maximize your on-premise BI investments
- Gain more insights into real-time NetSuite data
- Leverage existing SQL querying skillset

KEY CAPABILITIES

- Complete ODBC connectivity to NetSuite data
- Provides over 150 specific data views
- Supports real-time analytics using your BI tool of choice
- Comprehensive access to finance, sales and service data

Your data within NetSuite is one of your business's greatest assets, providing a comprehensive set of centralized real-time data across finance, sales, service and more.

The NetSuite ODBC Module enables you to tap this data further by enabling any ODBC-compliant tool to extract or directly analyze it. With the NetSuite ODBC Module, you can quickly and securely connect a variety of common Business Intelligence tools directly to NetSuite.

Mainstream on-premise Business Intelligence tools such as SAP Crystal Reports, IBM Cognos, Actuate and any ODBC client Windows-based BI tool can use the NetSuite ODBC Module.

Easily and Securely Connect Your Business Intelligence Tool to NetSuite

- Provides a secure connection through industry-standard SSL to your NetSuite information
- Enables access to accounting, CRM, payroll, custom records and other tables quickly and easily
- For on-premise BI tools, simply install the NetSuite ODBC driver and use any ODBC-compliant application to connect to the NetSuite database and log in using your NetSuite login credentials

Supports Comprehensive Access to NetSuite Data

- Provides a foundation for your business intelligence tool to query and analyze using SQL, and format and present NetSuite data to meet your exact requirements
- Enables ad hoc reporting and supports querying and linking from over 150 specific data views across finance, sales, service and more
- Supports mass data extraction capabilities for integration with downstream data warehousing systems
